Greenhouse Gas Accounting Software
Understanding greenhouse gas (GHG) emissions data and policy can be tricky, but The Climate Registry is here to help!

The Climate Registry Information System (CRIS)
The Climate Registry Information System (CRIS) is an easy-to-use, cloud-based system for measuring, reporting, and verifying your organization's carbon footprint. Each year, CRIS is audited and updated to reflect changes in international best-practice and the most current emission factors available. Promote your sustainability achievements knowing that your emissions data is the highest quality available.

“CRIS helps provide useful reporting metrics. The City of LA asks us for fuel use data so that the city can calculate city-wide emissions. We’re able to send over completed emissions data instead. It’s always good to have accurate metrics.”
– Lisa Wunder, Port of LA

“CRIS is straightforward and I appreciate how it helps us to determine whether or not we're using the correct emissions factors to calculate our emissions.”
– Jeff Robertson, USANA Health Sciences

To learn more about CRIS, TCR membership, and other available services, visit the "Programs and Services" page on our website, or contact TCR to set up a platform demo at help@theclimateregistry.org
CRIS Features

DATA UPLOAD & AGGREGATION
- Direct spreadsheet upload
- Data aggregation at facility and entity level

CALCULATION & REDUCTIONS
- Calculate emissions based on activity data or pre-calculated information
- Up-to-date and region-specific Emission Factors audited by TCR
- Measure emissions in metric tons of GHGs and CO₂ equivalent
- Carbon offsets, RECs, and reductions can be directly applied

ANALYTICS & REPORTING
- Evaluate emissions trends by industry, time period, geographic area, and/or Scope
- Create 20+ reports available numerically or as graphics
- Easy export in Excel or PDF formats
- Automatic quality assurance flags data entry errors or omissions
- Third-party verifiers provide findings directly in the reporting platform

QUALITY CONTROL & VERIFICATION
- Allows for multiple users and levels of permission
- Dashboard features easy access and emission totals
- Hands-on help desk support

USER SYSTEMS & WORKFLOW

Need a feature not mentioned above? TCR also offers platform customization. Our in-house development team will work with you to offer personalization. Rest assured knowing you will have an easy-to-use platform, supporting the highest-quality data.
